

PROCESS FOR THE ADAPTATION OF FLAVOR MIXTURES

ABSTRACT OF THE DISCLOSURE

The present invention relates to a process for the adaptation of flavor mixtures comprising the steps of:

- a) selecting or preparing a base matrix comprising a flavor mixture having the desired properties,
- b) analyzing the flavor composition and flavor concentration in the headspace above the base matrix,
- c) introducing the flavor mixture into another matrix,
- d) analyzing the flavor composition in the headspace above the other matrix, and
- e) on the basis of the results in step b) and d), changing the flavor composition in the other matrix in such a manner that the flavor properties in the other matrix correspond to those of the base matrix and
- f) preparing the novel flavor mixture in accordance with the analytical result and subjecting said flavor mixture to sensory testing.
